

Box 1: Diagram components of a basic computer network (include hosts, switches, routers, firewalls, backbone, domain name servers)

Box 2: Who designed the world wide web standard and for what purpose?

Box 3: Diagram and define a client and a server relationship:

Box 4: The WWW meets the internet: Using Universal Resource Locators (URLs) to find stuff. What is a URL? Where does the web browser come into all of this?

Box 5a: Describe the components of a single web page!

Box 5b: Diagram the components of a simple web page in a document tree!

Box 6: Choose a movie or TV show that you have some interest in during which a character uses the world wide web in some form. What film did you choose?

What site is visited?

What information is found?

Box 7: Use the "snipping tool" in MS windows to take a screen shot or two of your film on Youtube or something in which your character uses the WWW.

Which character?

What is being looked up?

What URLs are visible?

Box 8: What are the basic rules for naming web pages and creating a directory structure?

Box 9: Plan out your movie web page in this box and scrap paper below. What two pages do you want to have? What content do you want to share?

scratch space:
