

Final project Proposal

Loretta 9999 | Computer Fundamentals | CCAC | Spring 2018 | Online Section

Project title:

Develop a clever title that will make your project interesting. You can always change this.

Project overview:

Briefly describe what you plan to create for your final project. You can explore just about any element of this course as a final project: as long as it requires you to learn some new skills and the final product is useful or cool in some way.

Some ideas (based on past projects):

- Create a spreadsheet detailing each stage of pregnancy and the development of the young person by week of gestation
- Create a spreadsheet-based tool for some game or activity you engage in (Magic The Gathering, sports of any kind, collections). Add schnazzy formulas and such to make it powerful.
- Document some work process you engage in with pictures, video, etc. Curate that media into some kind of guide for others. Students have documented things like: installing a furnace, installing tile, and more.
- Create a more extensive professional profile website.

Background:

Describe why this project is interesting or useful to you or others.

- Where did your idea come from?
- Who is it useful for or interesting to?

Skill development resources:

Locate and document a 2-3 online resource you'll use to complete your project. For example, if you're working with a spreadsheet, find links to useful spreadsheet documentation online. (Check our spreadsheet modules for resource links). Web development example:

<https://www.w3schools.com/html/default.asp> Provides many step-by-step tutorials in web development.

Workflow steps:

1. Make a list of 5-6 steps you'll take to accomplish your project
2. Your steps don't have to be super detailed—this is an exercise for you!
3. Remember to include proofing and preparing your work for upload in your steps

Trickiest Parts:

Make some notes about some areas you may need help with or anticipate dedicating the most time to learning. This will allow your instructor and other students to offer guidance or suggestions as needed.
